INTRODUCTION.

This publication constitutes a subject-chronological monograph relating to the maps of America in the Library of Congress.

Many maps of rare interest are buried in books and atlases, and difficult to find when most wanted. They are often torn from their original places, their history becomes a question of doubt, and they are sold at a greater price than the atlas in which they were originally found. These I have endeavored to identify. The manuscript maps of the Revolutionary war, contained in the Faden, Force, and Rochambeau collections, many of them unknown to the historian, are in the Library and here noted.

The maps in atlases are each separately catalogued. A large number of old state and county maps and plans of cities are fully described. The original spelling in the titles of old maps has been retained. The measurements of the maps are in inches. I have prefaced this volume with a list of works relating to cartography.

This list only includes such maps as were in the Library at the time of the opening of the new building, in November, 1897. The large increase since then will eventually result in a supplemental volume. Some important titles of recent date, however, have been inserted.

P. LEE PHILLIPS,

Chief of Division of Maps and Charts.

- NOTE.—In Milburne's book entitled "The lance, cross and canoe," bet. pp. 72-77, is a reduced copy of this map with the following border note:
"The manuscript from which the above map was prepared, was found in the 'Bibliothèque du roi,' in Paris in a volume of La Harpe's journeys of 1718-1722. It is said to bear date the year 1700. If so, it is evident that after the original preparation and before publication some one had added matter subsequently ascertained, for the map above contains items of as late date as 1717. Also is to be noted the fact that while all the other parts of the map are in the French language, one single English phrase is to be found in the lower right-hand corner, to wit: 'De Soto landed 31 may, 1539.' This would indicate that some one other than the original draftsman had taken part in its creation and at a time subsequent to its original preparation."

 NOTE.—"The map facing the title of this volume is taken from one of North America engraved by Lucini, an Italian artist, originally on four sheets, three of which belong to the Warden collection of the state library. It will be perceived from its title that it is a map of New Belgium (now New York) and part of New England, the former of which provinces was claimed at the time to extend from Cape Cod to the capes of Delaware. The absence of any date renders it difficult, however, to ascertain precisely the year it was engraved, and this point can be determined only by other evidence. Boston, which was settled in 1630, is found laid down, but there is no mention of Maryland, the province of Virginia forming the

North America. Carta particolare, etc.—Continued.

southern boundary of New Belgium. As Maryland was first granted in 1632, it is evident the date of this map must be some year between that and the settlement of Boston. Most probably it was engraved in 1631. In point of time, it may be considered the third oldest map of the province extant, having, as far as yet known, been preceded by only two Dutch maps, one of 1616 and one of 1618, transcripts of which are in the office of the secretary of state, and of one of which this Italian map is evidently an improved copy."

NOTE.—Originally made for Ogilby's America. 1671. The following is taken from the calendar of State papers, Colonial series, America and West Indies, 1669-1674. Preface, p. xxxviii. "There are in this volume references to several maps of the colonies in America as well as of the West Indies. Sir Peter Colleton writes to his honoured friend John Locke" that mr. Ogilby is printing a relation of the West Indies, and wishes to get a map of Carolina, and he desires he will ask Lord Ashley for the maps of Cape Fear and Albemarle, so as to draw them into one with that of Port Royal and he will wait upon his lordship for the nomination of the rivers, etc. And sir Peter adds, if Locke would draw up a discourse to be added to this map in the nature of a description, "such as might invite people without seeming to come from us" it would very much conduce to the speedy settlement of Carolina (715). The sieur Sanson published two maps of Carolina some years after Ogilby's map was printed, in which the several counties and some of the rivers and capes are named after the lords, proprietors, viz., Albemarle, Ashley, Berkeley, Clarendon, Carteret, Craven and Colleton. John Ogilby, was appointed cosmographer to Charles II, and supplanted sir William Davenant as master of the revels in Ireland: he was also the originator of "Paterson's Roads." His "Advertisment" at the end of this volume contains some of his contributions to cosmography and a list of the several atlases he was engaged upon. His map of Africa was published in 1670, America in 1671, and the first part of Asia 1673, but his

North Carolina—Continued.

Description of the British Monarchy, referred to in his "Advertisment" was not published until 1675, under the title of "Britannia:" a "description" "of the kingdom of England and dominion of Wales." All these maps are to be found in the British Museum. Ogilby died in 1676, and was buried in St. Bride's church, Fleet st."

NOTE.—Originally made for Ogilby's America. 1671.

The following is taken from the calendar of State papers, Colonial series, America and West Indies, 1669-1674. Preface, p. xxxviii. "There are in this volume references to several maps of the colonies in America as well as of the West Indies. Sir Peter Colleton writes to his honoured friend John Locke" that mr. Ogilby is printing a relation of the West Indies, and wishes to get a map of Carolina, and he desires he will ask Lord Ashley for the maps of Cape Fear and Albemarle, so as to draw them into one with that of Port Royal and he will wait upon his lordship for the nomination of the rivers, etc. And sir Peter adds, if Locke would draw up a discourse to be added to this map in the nature of a description, "such as might invite people without seeming to come from us," it would very much conduce to the speedy settlement of Carolina (715). The sieur Sanson published two maps of Carolina some years after Ogilby's map was printed, in which the several counties and some of the rivers and capes are named after the lords, proprietors, viz., Albemarle, Ashley, Berkeley, Clarendon, Carteret, Craven and Colleton. John Ogilby, was appointed cosmographer to Charles II, and supplanted sir William Davenant as master of the revels in Ireland: he was also the originator of "Paterson's Roads." His "Advertismēt" at the end of this volume contains some of his contributions to cosmography and a list of the several atlases he was engaged upon. His map of Africa was published in 1670, America in 1671, and the first part of Asia 1673, but his Description of the British Monarchy, referred to in his "Advertismēt"

South Carolina—Continued.

was not published until 1675, under the title of "Britannia:" a "description" "of the kingdom of England and dominion of Wales." All these maps are to be found in the British Museum. Ogilby died in 1676, and was buried in St. Bride's church, Fleet st.

NOTE.—Prospectus attached to inside cover:

Proposals for publishing a survey of the roads of the United States of America. By Christopher Colles, of New York.

CONDITIONS.

That the work shall be neatly engraved upon copper, each page containing a delineation of near 12 miles of the road upon a scale of about one inch and three quarters to the mile, and particularly specifying all the cross roads and streams of water which intersect it, the names of the most noted inhabitants of the houses contiguous to or in view of the road; the churches and other public buildings; the taverns, blacksmith's shops, mills, and every object which occurs to render it a useful and entertaining work, and in every respect equal to the specimen of the three first pages annexed.

That a set of general maps shall be made upon a small scale with references from them to the particular page where the description of any road is to be found; these maps will then answer as an index and will be found more convenient than any other index that can be made.

That each subscriber shall pay one quarter dollar at the time of subscribing (to defray several incidental charges necessary for the work) and one eighth of a dollar upon the delivery of every six pages of the work: but such gentlemen as are willing to advance one dollar will be considered as patrons of the work, and will not be entitled to pay any more till the value thereof is delivered in.

That subscribers shall pay 20 cents for each of the general maps and three cents for each sheet of letter press in the alphabetical lists of other necessary explanation of the drafts.

That each subscriber shall be considered as engaging to take 100 pages.

That non subscribers shall pay three cents for each page of the work.

These surveys are made from actual mensuration, by a perambulator of a new and convenient construction, invented by said Colles, and very different from any hitherto used, which determines the number of revolutions of the wheel of a carriage to which it is fixed, and it is found by experiment to ascertain the distance to a much greater degree of accuracy than could be expected; the direction of the road is determined by a compass likewise affixed to the surveying carriage.

ACCOUNT OF THE ADVANTAGES OF THESE SURVEYS.

A traveller will here find so plain and circumstantial a description of the road, that whilst he has the draft with him it will be impossible for him to miss his way: he will have the satisfaction of knowing the names of many of the persons who reside on the road; if his horse should want a shoe, or his carriage be broke, he will by the bare inspection of the draft be able to determine whether he must go backward or forward to a blacksmith's shop: Persons who have houses or plantations on the road may in case they want to let, lease, or sell the same, advertise in the public newspapers that the place is marked in such a page of Colles's Survey of the roads; this will give so particular a description of its situation that no difficulty or doubt will remain about it. If a foreigner arrives in any part of the Continent and is under the necessity to travel by land, he applies to a bookseller, who with the assistance of the index map chooses out the particular pages which are necessary for his direction. It is expected many other entertaining and useful purposes will be discovered when these surveys come into general use.

Subscription papers will be sent to most of the Booksellers on the continent

NOTE.—This atlas contains 78 maps. They are not numbered consecutively, the numbers 2, 3, and 5 to 15, inclusive, being omitted. This omission was made in order that those maps which appear in both the U. S. Commission Atlas and in this Atlas might bear same numbers. Thirteen maps in the U. S. Commission Atlas (numbers 2, 3, and 5 to 15) do not appear in this Atlas. Fifteen other maps here numbered 77 to 91 inclusive, appear here, but not in the U. S. Commission Atlas.

Virginia.¹ Americæ pars, nunc Virginia dicta, primum ab Anglis inuenta sumtibus Dni. Walteri Raleigh, anno dñi M. DLXXXV. Autore Ioanne With sculptore Theodore de Bry, qui et excud. Scalle of 25 leagues. 11¼ x 15¼. [In Harriot (Thomas). Admiranda narratio fida tamen, de commodis et incolarvm ritibvs Virginiae. fol. Francoforti ad Moemvm, tipis Ioannis Wecheli, svmtibvs vero Theodori de Bry, 1590. pl. 1].

NOTE.—This first map of Virginia was made in 1585, by John With, who accompanied the second expedition sent out by Raleigh. The map first published by De Bry in 1590 was the forerunner of all maps of Virginia published in atlases and elsewhere up to John Smith's map in 1608. The same liberty was taken with this map up to the one made by Augustine Herman in 1670. Herman's map was then copied to 1751, the date of the first issue of Fry and Jefferson's great map, revised in 1755, by John Dalrymple and reissued in 1775. These four maps, made from original surveys, contain all which the student can learn from maps of Virginia to 1751. After that the Indian, followed by the Revolutionary war, made the country better known with more cartographical information, the result.

NEW CITY OF WASHINGTON.

The following description is annexed to the plan of the City of Washington, in the district of Columbia, as sent to Congress by the President some days ago.

Plan of the City intended for the permanent seat of the Government of the United States, projected agreeably to the direction of the President of the United States, in pursuance of an Act of Congress, passed on the 16th of july, 1790, "establishing the permanent seat on the banks of the Potowmack."—By Peter Charles L'Enfant.

OBSERVATIONS EXPLANATORY OF THE PLAN.

- I. The positions for the different grand edifices, and for the several grand squares or areas of different shapes as they are laid down, where first determined on the most advantageous ground commanding the most extensive prospects, and the better susceptible of such improvements as the various interests of the several objects may require.
- II. Lines or avenues of direct communication have been devised to connect the separate and most distant objects with the principals, and to preserve through the whole a reciprocity of sight at the same time. Attention has been paid to the passing of those leading avenues over the most favorable ground for prospect and convenience.

Washington, D. C.—Continued.

III. North and south lines, intersected by others running due east and west, make the distribution of the city into streets, squares, &c. and those lines have been so combined as to meet at certain given points with those divergent avenues, so as to form on the spaces "first determined," the different squares, or areas, which are all proportional in magnitude to the number of avenues leading to them

BREADTH OF THE STREETS.

Every grand transverse avenue, and every principal divergent one, such as the communication from the President's House to the Congress House, &c. are 160 feet in breadth, and thus divided:

10 feet for pavements on each side is.....	20
30 of gravel walk, planted with trees on each side	60
80 in the middle for carriage way	80

The other streets are of the following dimensions, viz:

Those leading to the public buildings or markets.....	130
Others.....	$\left\{ \begin{array}{l} 110 \\ 90 \end{array} \right.$

In order to execute the above plan, Mr. Ellicott drew a true meridian line by celestial observation, which passes through the area intended for the Congress-House; this line he crossed by another due east and west, and which passes through the same area. These lines were accurately measured, and made the basis on which the whole plan was executed. He ran all the lines by a transit instrument, and determined the acute angles by actual measurement and left nothing to uncertainty of the compass.

REFERENCES.

- A. The equestrian figure of George Washington, a monument voted in 1783, by the late Continental Congress.
 - B. An historic column—also intended for a mile or itinerary column, from whose station (at a mile from the federal House) all distances and places through the continent are to be calculated.
 - C. A naval itinerary column, proposed to be erected to celebrate the first rise of a navy, and to stand a ready monument to perpetuate its progress and achievements.
 - D. A church intended for national purposes, such as public prayer, thanksgivings, funeral orations, &c. and assigned to the special use of no particular sect or denomination, but equally open to all. It will likewise be a proper shelter for such monuments as were voted by the late Continental Congress, for those heroes who fell in the cause of liberty, and for such others as may hereafter be decreed by the voice of a grateful nation.
 - E. E. E. E. Five grand fountains, intended with a constant spout of water. N. B. There are within the limits of the city 25 good springs of excellent water, abundantly supplied in the driest season of the year.
 - F. A grand cascade, formed of the water of the sources of the Tiber.
 - G. G. Public walk, being a square of 1200 feet, through which carriages may ascend to the upper square of the Federal House.
 - H. A grand avenue 400 feet in breadth, and about a mile in length, bordered with gardens ending in a slope from the houses on each side: this avenue leads to the monument A. and connects the Congress garden with the
 - I. President's park and the
 - K. Well improved field, being a part of the walk from the President's house of about 1800 feet in breadth, and three-fourths of a mile in length. Every lot deep colored red, with green plots, designates some of the situations which command the most agreeable prospects, and which are best calculated for spacious houses and gardens, such as may accommodate foreign ministers, &c.
 - L. Around this square and along the
 - M. Avenue from the two bridges to the federal house the pavements on each side will pass under an arched way, under whose cover shops will be most conveniently and agreeably situated: this street is 160 feet in breadth and a mile long.
- The fifteen squares colored yellow, are proposed to be divided among several states in the Union, for each of them to improve, or subscribe a sum additional to the value of the land for that purpose, and improvements round the squares to be completed in a limited time. The centre of each square will admit of statues, columns, obelisks, or any other ornaments, such as the different states may choose to erect, to perpetuate not only the memory of such individuals whose councils or military achievements were conspicuous in giving liberty and independence to this country: but those whose usefulness hath rendered them worthy of imitation; to invite the youth of succeeding generations to tread in the paths of those sages or heroes whom their country have thought proper to celebrate.

Washington, D. C.—Continued.

The situation of those squares is such, that they are the most advantageously and reciprocally seen from each other, and as equally distributed over the whole city district, and connected by spacious avenues round the grand federal improvements, and as contiguous to them, and at the same time as equally distant from each other as circumstances would admit. The settlements round these squares must soon become connected.

The mode of taking possession of, and improving the whole district at first, must leave to posterity a grand idea of the patriotic interest which promoted it.

The small spaces colored red, are intended for the use of all religious denominations, on which they are to erect places of worship, and are proposed to be allotted to them in the manner as those coloured yellow are to the different states in the Union; but no burying ground will be admitted within the limits of the city, an appropriation being intended for that purpose without.

N. B. There are a number of squares or areas unappropriated, and in situations proper for colleges and academies, of which every society, whose object is national, may be accommodated. Every house within the city will stand square on the streets, and every lot on the divergent avenues will run square with their fronts on the most acute angle, will not measure less than 56 feet, and may well be above 140. Some of the streets running north and south, and east and west, are about 1200 poles, and the transverse streets about 1300 poles.

LATITUDE OF CONGRESS HOUSE, 38. 53 N. LONG. O. O.

X. Tiber creek. The water of this creek is intended to be conveyed on the high ground where the Congress-House stands, and after watering that part of the city, its overplus will fall from under the base of the edifice, and in a cascade of 20 feet in height, and 50 in breadth, into the reservoir below, thence to run in three falls through the gardens into the grand canal.

The perpendicular height of the ground where the Congress house stands, is above the tide of Tiber creek 78 feet.

Perpendicular height of the west branch above the tide of Tiber creek, 115 feet, 7 inches and two eighths.

This branch and that of the Tiber, is intended to be conveyed to the President's house.

From the entrance of the river Potowmack up to the second, the depth of water is from 5½ to 4 fathoms—the deepest all along the shore where wharves are marked.

——— Territory of Columbia. Drawn by Andw. Ellicott. 22×22 . [n. p. 1793].

NOTE.—The first topographical survey of the District. The Library has three of the original copies and the reproduction no. 3059 made by U. S. Coast and Geodetic survey. Also found in "Maps of the District of Columbia, 1852," without name of author or date. During the year 1792, the commissioners employed Andrew Ellicott to survey the boundary lines of the Federal District, and on January 1, 1793, he made the following report of the survey to them:

"It is with singular satisfaction that I announce to you the completion of the survey of the four lines comprehending the Territory of Columbia. These lines are opened and cleared forty feet wide; that is, twenty feet on each side of the lines limiting the territory; and in order to perpetuate the work, I have set up square milestones, marked progressively with the number of miles from the beginning on Jones's Point to the west corner; thence from the west corner; thence from the north corner to the east corner, and thence to the place of beginning on Jones's Point, except as to a few cases where the miles terminated on a declivity or in water; in such cases the stones are placed on the nearest firm ground, and their true distances in miles and poles marked on them. On the sides facing the Territory is inscribed, 'Jurisdiction of the United States;' on the opposite sides of those placed in the State of Virginia is inscribed 'Virginia,' and of those in the State of Maryland is inscribed 'Maryland.' On the fourth side is inscribed the year and the present position of the magnetic needle at the place. With this you will receive a map of the four lines, with a half mile on each side, to which is added a survey of the waters in the Territory and a plan of the city of Washington."

This report evidently refers to the above map, concerning which there has been some question as to date of making.

PORTO RICO.

BY

A. P. C. GRIFFIN,
CHIEF OF DIVISION OF BIBLIOGRAPHY.

MARCH 2, 1901.—Presented by Mr. LODGE, referred to the Committee on
Library, and ordered to be printed.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.

1901.

INTRODUCTION.

In the compilation of this list no effort has been made to go beyond the resources of this Library.

It embodies a considerable collection of native literature gathered by Dr. Friedenwald upon the occasion of a visit to the island in 1898.

Appended is a list of Porto Rican administrative documents, reports of local organizations, etc.

The spelling "Porto Rico" is in conformity with the rule adopted by Congress and accepted by the Board on Geographic Names.

A. P. C. GRIFFIN,
Chief of Division of Bibliography.

A
LIST OF BOOKS
(WITH REFERENCES TO PERIODICALS)

ON THE
DANISH WEST INDIES.

BY
A. P. C. GRIFFIN,
CHIEF OF DIVISION OF BIBLIOGRAPHY.

MARCH 2, 1901.—Presented by Mr. LODGE, referred to Committee on
the Library, and ordered to be printed.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1901.

INTRODUCTION.

The only authority in English dealing exclusively with the Danish West Indies appears to be C. E. Taylor's "Leaflets from the Danish West Indies: Descriptive of the social, political and commercial condition of these islands." The author was for many years a resident of St. Thomas, and his work has the value of affording information acquired at first hand. The geographic manuals like Réclus's "The Earth and its inhabitants" and Stanford's "Compendium of geography and travel" give good summary accounts of the history and natural features of the islands.

The negotiations for the purchase of the islands in 1865-1869 are well set forth in James Parton's "The Danish islands: Are we bound in honor to pay for them?" and in briefer form in Curtis's "The United States and Foreign Powers" and Wharton's "A Digest of the international law of the United States." The proceedings of the Danish parliament are printed in the "Rigsdagstidende." A pamphlet by Dixon, "The St. Thomas treaty. A series of letters to the Boston Daily Advertiser," reports the proceedings in Washington while the treaty was pending, and also contains the text of the treaty.

The Danish colonial fiscal system in the West Indies is the subject of an essay by C. W. Tooke, printed in "Essays in colonial finance by the members of the American Economic Association."

The tabulated statistics of the commerce and commercial regulations of the islands may be found in the publications of the Bureau of Statistics of the Treasury Department and the Foreign Commerce Bureau of the State Department. The publications of the Statens statistiske Bureau of Denmark include statistical tables of imports and exports, merchant marine, and navigation. The various reports from our consuls at St. Thomas have been noted in their proper place in this list.

“Eine sehr gründliche und gediegene Festschrift zum 150 jährigen Jubiläum der Brüdermission in Westindien erscheint hier nach des Verfassers Tode in unverändertem Abdruck. Es ist zu bedauern, dass diese treffliche Arbeit noch nicht weiter geführt ist. Das Buch gehört zu den wichtigsten Quellen der Geschichte Westindiens. Ein Kartenblatt mit den drei genannten Inseln im Massstab 1: 250,000, in guter Ausführung, ist beigegeben.”

 "Seit der Aufhebung der Sklaverei und dem Ueberhandnehmen der Dampfschiffahrt hat sich der Character der Insel völlig geändert. Die Zuckerpflanzungen sind verschwunden, der Boden ist so gut wie unbebaut, eine Vermittelung des Handels zwischen den Küsten Mittel- und des nördlichen Südamerikas mit den Vereinigten Staaten und Europa findet nicht mehr statt. Jetzt ist St. Thomas nur noch ein Knotenpunkt der Dampfschiffahrt nach Westindien. Die einzige Ortschaft ist Charlotte Amalie mit stationärer Bevölkerung (ca 12000). Die Gezeitenströmungen sind so unregelmässig, dass eine richtige Hafenzeit nicht angegeben werden kann."
